

ICM Poll for The Guardian

Fieldwork dates: 9-11th September 2014

Interview Method: Telephone.

Population effectively sampled: All adults aged 16+

Sampling Method, RDD: A random sample of telephone numbers was drawn from the entire BT database of domestic telephone numbers across Scotland. Each number so selected had its last digit randomised so as to provide a sample including both listed and unlisted numbers.

Sample size: 1,000

Data weighting: Data were weighted to the profile of all Scottish adults aged 16+ (including non telephone owning households). Data were weighted by sex, age, social class, household tenure, work status and region. Targets for the weighted data were derived from Census 2011.

The data were further weighted by declared votes among people living in Scotland in the 2011 Holyrood Scottish Parliament general election. The weighting scheme is designed as follows:

Weighting by past votes

1. Respondents are asked whether they voted in the 2011 Holyrood election and if they did, which party they voted for.
2. The sample is weighted by demographics (age, sex, tenure etc). However, after such weighting the declared past votes may not match, exactly, the results of the last election. Partly this is because demographics (by which ICM control the sample) are relatively poorly correlated with vote behaviour. Nevertheless past vote weighting has to be used with caution as some people genuinely forget how they voted. We cannot simply weight the data to the actual results last time.
3. ICM took the declared past votes on this poll and compared them to the actual result of the last Holyrood election. We gave a weight of 80% to the results of the last election and 20% to the poll recall, thereby assuming that most of the difference can be attributed to political imbalance in the sample and to faulty recall.

Weighting for turnout

1. ICM ask respondents to say how likely it is that they will go and vote in the Independence referendum using a ten points scale where 10 means they would be absolutely certain to vote and 1 means they would be certain not to vote.

2. We then weight people by their anticipated turnout. If someone is 10/10 certain to vote, they are given a weight of 1.0. If someone is 9/10 certain to vote they are given a weight of 0.9 etc. People who tell us they are likely to vote in the referendum but did not vote in the last Holyrood election, are further down-weighted. If someone says they are 10/10 certain to vote but did not vote in 2011, they are given a weight of 0.5. If they say 9/10 certainty, the weight becomes 0.45 etc.

Voting intentions: ICM derives vote intentions from 2 questions.

First of all respondents are asked how likely it is that they would be to go and vote in the referendum. Those who say which way they intend to vote. Respondents are then asked whether they voted in 2011 and which party they voted for in that election. The vote figures shown in the table are calculated after ICM has excluded those who say they will not vote, refuse to answer the question or don't know who they would vote for. The figures are adjusted for turnout calculated accordingly to their stated intentions to vote.

Questions: The computer tables attached in PDF format show each question, in full, in the order they were put to respondents, all response codes and the weighted and un-weighted bases for all demographics and other data including but not limited that published .

	1	1	Q.1A As you may know, a referendum on independence will be held in Scotland on 18 September 2014. Some people have said they would not vote in that referendum, while others have said they would vote. How certain it is that you would actually vote in the independence referendum on 18th September? On a ten point scale if 10 would mean you would be absolutely certain to vote and 1 would mean you would be certain not to vote how likely is it that you would cast your vote?	Base: All respondents	1000
	2	1	Q.1A As you may know, a referendum on independence will be held in Scotland on 18 September 2014. Some people have said they would not vote in that referendum, while others have said they would vote. How certain it is that you would actually vote in the independence referendum on 18th September? On a ten point scale if 10 would mean you would be absolutely certain to vote and 1 would mean you would be certain not to vote how likely is it that you would cast your vote?	Base: All respondents	1000
